

Anti-Corrosion • Anti-Rust • Anti-Mold & Mildew

Intercept Technology™

...Simply Better Protection

Shrink Film that offers superior long-term protection—without oils

Intercept Technology™ Shrink Film is a superior plastic packaging technology that provides effective long-term, corrosion protection against rust, oxidation, mold, and mildew. It's clean, green, and safe... reusable and recyclable.

Intercept was developed by Bell Labs over 20 years ago.

It's been rigorously tested by independent scientists and laboratories, and approved for use by companies throughout the world.

Intercept is proven to protect everything from base metals to high-end electronics and optics, from aerospace and automotive to telecommunication equipment and weapons.

The Perfect Solution. Intercept Shrink Film is the next generation of long-term industrial protection, fortification specifically designed to protect your assets before they can be attacked or degraded by destructive corrosion.

It's science, but it works like magic

- Intercept guards against oxidation and provides long-term protection from rust and corrosion, in nearly any environment, for up to 10 years.
- The scientists at Bell Labs invented a method to transform normal plastic into a high-gas barrier material, utilizing **copper** reacted into the plastic molecular chain.
- Reacts with and then permanently neutralizes corrosive gases.
- Seals and forms like a standard plastic.
- Doesn't contaminate or leave deposits of any kind.
- Safe for all products — NASA Approved.

Shrink Film for Long-term Contamination-Free Corrosion Control

Intercept Technology™

...Simply Better Protection

Intercept Technology™ is the most advanced packaging system invented because of its comprehensive protection, cleanliness, proven field performance, safety, simplicity, and design flexibility. Intercept is a disruptive technology, providing proven protection for long-term storage of valuable assets. It will save you money, time, and worry.

Developed by Bell Labs, Intercept was specifically designed to overcome the many shortcomings of traditional protective packaging in the field. Quite simply, it creates an **active** barrier — rather than a passive one — and shrouds your assets with a stronghold of superior corrosion control.

Outdoor or Indoor Long-term Storage Protection

- No volatile chemicals
- No outgassing
- Inert / non-coating
- Clean
- Cost-effective
- Recyclable
- Reusable
- RoHS compliant

Many Applications:

- Metals, plastics, fabrics, rubber, etc. subject to corrosive damage (rust, oxidation, mold, mildew)
- Complex shapes and large assets no problem
- Protect one asset OR an entire factory

Traditional materials problematic

Intercept provides something different: **a reactive barrier to corrosive gases**. Many traditional materials (foil laminates) are simply passive barriers, working on the dry method of preservation which require less than 37% RH (relative humidity) at all times. This can work well, however the package is not designed to be opened and closed, or resealed. Even a single pin-hole in the structure or seal will compromise the protection. Barrier packaging demands complete hermetic seals and requires the bag is sufficiently loaded with desiccant to maintain the low RH level. Other methods rely on volatile protection (VCIs - Volatile Corrosion Inhibitors) which add to the VOC loading. They need to be monitored for shelf life and correct material for the metal being protected.

Non-ferrous metals, however, corrode primarily due to corrosive gases, not moisture. Dry pack packaging is then ineffective, as humidity is not the driving force. This can be seen (for example) in shipments to Asia. Due to severe levels of atmospheric pollution (as much as 200 times higher than here in the US), non-ferrous metals are often corroding in days or weeks instead of what was traditionally seen in months or years.

Intercept works better

Because foils are passive, they provide only inert barrier properties. Intercept works differently, performing as an **active** barrier. This unique material becomes a tortuous path for corrosive gases — including Sulfur, Chlorine, Ozone, Nitrous gases, etc. Intercept's robust protection prevents the gases from penetrating the bag, plus Intercept cleanses the interior air space, creating a neutralized micro-environment inside—free from destructive corrosive gases. By eliminating the fuel that's necessary for corrosion you're protecting assets and all their components: both ferrous and non-ferrous metals, rubber, plastics, fabrics, paint, and more.

Intercept is the only anti-corrosion material that has been awarded a prestigious German Government Environmental Award for being the preferred anti-corrosion packaging. Intercept contains no oils, no volatiles, and no contaminants, and it does not outgas. It has accelerated breakdown in landfills, and is fully recyclable and reusable. It can easily be reclosed in the field and at customs. The ESD protection is permanent, as ESD values on the films and bags are normally 10e6 to 10e9 Ohms/Sq, the ideal ESD range.

Ideal solution for every industry:

- Electronics
- Aerospace
- Telecommunications
- Weapons
- Heavy Equipment
- Maritime
- Shipping
- Energy
- Transportation
